(54) Title: CLASP

(57) Abstract: A clasp is described that comprises two identical parts (10, 12) that can be joined together to fasten the clasp and that can be separated from each other to release the clasp. Each of the first and second parts includes: a) a resilient latch (14) with an outwardly facing barb (26); b) a channel (32) for receiving the barb of the other part; c) a catch (35) located in the channel for engagement with the barb of the other part when the two parts are pushed together in an axial direction (A); d) a housing (16) containing the channel and extending transversely over the width of the part, the housing having an interface surface (20) extending between the latch (14) and the catch (35) and abutting the corresponding interface surface of the other part when the clasp is fastened, the interface surface extending diagonally with respect to the axial direction (A) such that the interface surface in the region of the catch (35) is located axially behind the interface surface in the region of the barb (26); the barb (26) of each part engages the catch (35) of the other part as the two parts are pushed together, the engagement keeping the parts together. The latches (14) of the two parts can be moved to release each barb (26) from the catch (35) of the other part. The interface surfaces (20) of the two parts are arranged to slide over each other to separate the two parts when the barbs are released from the catches.

INTERNATIONAL SEARCH REPORT

International Application No
PCT/GB 03/02704

A. CLASSIFICATION OF SUBJECT MATTER
IPC 7 A44B11/26

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC 7 A44B A44C

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the International search (name of data base and, where practical, search terms used)

EPO-Internal, PAJ

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category *	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.

☒ Further documents are listed in the continuation of box C.

☒ Patent family members are listed in annex.

* Special categories of cited documents:

- *A* document defining the general state of the art which is not considered to be of particular relevance
- *E* earlier document but published on or after the international filing date
- *L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- *O* document referring to an oral disclosure, use, exhibition or other means
- *P* document published prior to the international filing date but later than the priority date claimed

- *T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- *X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- *Y* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
- *&* document member of the same patent family
